Cross Border & APAC Domestic Payments | FX, Rates & Derivatives
| Digital Transformation | Translating Treasury Problems into
Scalable Banking Products | AI | >100% Revenue Growth | >20%
Transaction Growth

Singapore

Summary

I am extremely curious, and that fuels me to develop innovative treasury and payment solutions. The results I am most proud of are not the roadmaps. It's the numbers behind them:- 143% growth in FX transaction revenue- 36% cost savings from payments transformation- 77% cut in payment processing time- 23% increase in cross-border payment volumes through strategic commercialization across APAC. Across APAC domestic and cross border payments, corporate treasury, and transaction banking, I build products and commercialize payment capabilities. I understand corporate treasury from the client side. Payment factories, in-house banking, shared service center models, cash positioning. I know what a Group Treasurer actually needs, which means I can build products they will adopt rather than products that need a sales team to explain. My FX knowledge covers spot, outright forwards, FX swaps, and non-deliverable forwards across free and restricted APAC currencies. Each instrument solves a specific corporate treasury problem. For instance, when a forward protects a known cash flow, when an NDF is the only viable offshore hedge, and when an FX swap provides temporary liquidity without taking a directional currency view. I have seen two recurring problems when working with customer: instrument mismatch, where treasurers use wrong product for their exposure type, and treasurers treat hedging as speculation and abandon disciplined positions when markets move. My edge is that I have sat on both sides of the table from business and technology perspective. I started in technology space, delivering payment system solutions across APAC before moving into banking as a product manager. I can read system designs, understand the impact on payment flows and settlement logic, and translate that directly into roadmaps banks can commercialize. No translator needed between business and technology. At JP Morgan, led blockchain-based interbank clearing through Kinexys,

and currently payment automation across APAC. Building AI-powered product tools using LangChain, RAG pipelines, and LLM agents during my free time. Check my GitHub: <https://github.com/chongming-koh/LLMEngineeringSocial.git>

Transaction Banking Skills: Payments/Collections, Cash Management, Product Management, Product Commercialization, Product Development, Trade Finance, Channels Product, Liquidity, FX, Digital Solutions

Corporate treasury cash management skills: In-house bank, payment factories, regional treasury center, cash positioning, forecasting, payment execution, account management.

Experience

J.P. Morgan

Product Manager (Automation)

March 2025 - Present (1 year 4 months)

Singapore

Lead product strategy and delivery for enterprise payment capabilities across global platforms, driving automation initiatives to deliver reliable, high impact solutions that improve client experience and operational efficiency.

J.P. Morgan

Product Manager

November 2022 - December 2024 (2 years 2 months)

Singapore

Enablement of cross-border payments on a digital blockchain platform across APAC, EMEA, and North America.

I actively contribute to strategic discussions and product development in conglomerate partnerships, successfully commercializing the service in SG and US markets.

To ensure product viability, I collaborate with internal stakeholders to maintain adherence to the governance framework.

UOB

Payments Product Manager (Product Management and Development),
Transaction Banking

January 2020 - October 2022 (2 years 10 months)

I am regional product manager for cross-border, domestic payments and scheme products (CBPR+, HVPS+) across the ASEAN region and SME markets leading digital payments transformation initiatives.

I executed in-depth market analysis to define a strategic roadmap, identifying key growth and innovation opportunities to enhance payment capabilities, FI clearing services, and customer satisfaction.

I have represented as a business contributor to Singapore industry ABS and MAS forums/meetings for SG MEPS+/SCRIPS and delivered ISO20022 capabilities for CBPR+ and ASEAN HVPS+ product schemes.

CIMB

4 years 6 months

Payments & Collections Product Manager, Transaction Banking
January 2017 - December 2019 (3 years)

Singapore

I am accountable for product profitability and have executed commercialization strategies and pricing frameworks. I spearheaded 2 transaction FX and payments campaigns tailored for global and ASEAN markets, achieving significant revenue growth and customer expansion

I led digital transformation for payments and enabled STP to reduce processing time by more than 50% and enhance the integration of FX within cash management solutions.

I commercialized products and defined roadmaps through a data-driven approach, targeted campaigns, and collaboration with the marketing team to develop effective marketing materials.

Channels Product Manager, Transaction Banking
July 2015 - December 2016 (1 year 6 months)

Singapore

I owned the client's online transaction experience by defining the product strategy, roadmap, and features, incorporating input from line-of-business teams. Enhancements were prioritized based on business needs, funding, and timelines.

I have enabled and commercialized liquidity management solutions on Internet banking channels for zero-balancing account (ZBA) and target balance sweeps.

I drove feature delivery and product development in partnership with technology, service, risk, and legal teams and training to implementation, support, and sales teams.

Clear2Pay

Lead Business Analyst (Team Lead)

May 2011 - June 2015 (4 years 2 months)

Singapore, China

I led a team of three to deliver payment system solutions across nine countries in APAC, driving regional projects and ensuring successful implementation in diverse markets within the wholesale payments sector.

I have implemented domestic and cross-border payment products in APAC, with hands-on experience in North Asia, ASEAN, and Oceania local payment market infrastructures.

My key knowledge areas included ISO20022, SWIFT MT, Clear2pay OPF and XCT features of a global payment system solution.

MavenTree Technology Pte Ltd

Software Consultant

April 2008 - April 2011 (3 years 1 month)

Singapore

I am responsible for gathering user requirements with business users and built 2 applications using Java EE, EJB2.0, Struts, Hibernate and Spring framework

- Perform research and troubleshooting to correct problems using analytical skills
- Oracle database, PL/SQL, procedures, views
- Managed aspects of technical support and high level support to business users
- Software development life cycle and requirements gathering experience
- Documented and preparation of system test plans, test cases, executing test cases

E7technologies

Software Engineer

March 2007 - March 2008 (1 year 1 month)

I developed a Human Resource System and documented and prepared system test plans.

Skills that I have utilized to accomplish my tasks are:

- Linux (Slackware & SUSE), shell scripts
- J2EE programming
- MYSQL and SQL scripting
- JBoss app server

Keppel Engineering

IT Executive

December 2005 - February 2007 (1 year 3 months)

Developed Purchasing and Variation Order System in using J2EE technologies.

Maintaining software applications & solving users IT issues
